

STARPLUS[®] DHS[™]

*The Answer To Your Company's
Growing Communication Needs*

STARPLUS[®] DHS[™]

Today's dynamic business environment makes it essential for the small to medium-size growing business to have a reliable telephone system that incorporates sophisticated digital technology with powerful features. This system must be flexible enough to cost effectively grow with your business, while making your telecommunications easy and efficient.

Presenting STARPLUS DHS, a Digital Hybrid System designed to meet the needs of today's growing business.

Engineered for Today's Growing Business

STARPLUS DHS combines performance, quality and value to provide a communications system you can count on. STARPLUS DHS systems are specifically engineered to provide growing businesses advanced technology and the ability to expand without loss of a large initial investment. With three flexible system choices, STARPLUS DHS offers an affordable communication solution to fit your business needs.

The basic DHS system is perfect for a small business. Starting with 3 lines and 8 stations, it can easily expand up to 8 lines and 16 stations or 9 lines and 24 stations.

For businesses that need more lines than the basic DHS system, Vodavi's DHS-E is ready with expanded capabilities for up to 18 lines and 48 stations.

For larger organizations needing more capacity to grow in their telephone systems, DHS-L offers flexible systems starting at 8 lines and 8 stations with expansion up to 72 lines or 144 stations plus a T1.

Feature buttons and soft keys put sophisticated call processing at your fingertips.

Powerful and Easy

STARPLUS DHS is a powerful system, which includes over 200 system and station features. Caller ID, Voice Over Busy, Direct Station Select Console and Single Line Telephone Support are just a few of the many features offered to help you increase productivity. We know having loads of features is useless if they are too complicated to use. The STARPLUS DHS makes features easy to access through the large LCD screen menu prompts and programmable soft keys that give you one-touch access to the features you use most.

ADP Provides an Unmatched Level of Connectivity and Flexibility

With Additional Device Ports (ADPs), STARPLUS DHS enables you to connect traditional communications equipment. You can use the optional analog adapters to connect any single line device such as a fax, modem, credit card verifier, cordless phone or answering machine to the digital telephone's ADP jack.**

With the optional Single Line Adapter, "port gain" is possible. "Port Gain" provides the flexibility to split a digital channel and serve two single-line devices with one digital port. This allows each device to have a separate extension number, so you can use them simultaneously, increasing user productivity and enhancing customer service. Imagine faxing a document or verifying a credit card number while talking on the phone.

"Port-gain" solves logistical challenges when you need expansion at a location limited by the number of cables serving it.

One of Vodavi's three flexible DHS systems is sure to meet your business needs.

DHS
3 x 8 to 12 x 16
or 9 x 24

DHS-E
Up to 18 x 48

DHS-L
8 x 8 to
72 COs or 144
station, plus
a T1

STARPLUS DHS is a digital hybrid system which allows you to easily integrate single-line telephones, answering machines, fax machines, automated attendant and voice mail systems.

****Requires special wiring to use the ADP jack.**

Voice Over Busy Ensures Access to Busy Stations

With the Voice Over Busy feature, you can communicate with an inside party that is either on a call or using the speakerphone, without interrupting the outside party. A reply can be sent to the display of the inside party via the Mute button toggle.

Soft Keys Eliminate Programming Problems

Say goodbye to time consuming, complex programming and access codes. Soft keys located under the super-sharp LCD enable you to quickly access the most commonly used features as they are displayed on the screen. Want to make a conference call? Just push the button as it appears on the display!

Flexible Keypad Operation

With STARPLUS H-T-P operation, a flexible button can be programmed for station users to receive internal calls hands free (two-way), with a tone signal or in privacy mode (call announce only). Dual color LED's indicate your selection.

Direct Inward System Access (DISA) Improves Accessibility

With DISA, authorized system users can call in from any touch tone telephone and access the system's CO lines to make outgoing calls expanding the reach of your office system. Benefit from system features such as conferencing, transferring and call forwarding from your home or when you're on the road. In addition, callers can dial a station directly, eliminating the need for them to be transferred to the attendant.
