

FUN-1 Speaker Microphone

The **VoxTronix™ FUN-1** is an attractive, compact, handheld speaker microphone that makes operating your radio a snap. With the **FUN-1** you can transmit, receive, and adjust your listening volume even while your radio is inside of your shirt pocket or safely clipped to your belt!

The loud, front-firing speaker of the **FUN-1** lets you hear what's going on and a 360° rotating clip on the back of the mic secures it to the lapel or shoulder area of your clothing when it is not in use. The conveniently located volume control knob on the top of the mic enables you to adjust your listening volume without even touching your radio! For additional privacy, the **FUN-1** has a built-in earphone jack, to which you can attach any mono earphone with a standard 3.5 mm plug (earphone not included). Doing so disables the microphone's internal speaker, so that only you can hear the communications that your radio receives. The conveniently located Push-to-Talk switch can be operated manually or locked for hands free VOX operation.

FUN-2 Lapel Microphone

Our **FUN-2** is a lightweight microphone meant to be worn on the user's lapel or shirt collar. It has a conveniently located Push-to-Talk switch (PTT) on the side of the microphone and a PTT lock slide switch on the back of the unit that allows easy VOX operation. The metal reinforced clip on the back of the **FUN-2** rotates 360° for ease of use. For listening, the **FUN-2** features an in-line earphone with a soft rubber earhook that fits comfortably and holds the earphone in place even while jogging or engaging in other outdoor activities. The earphone easily adjusts to fit either the left or the right ear depending on your preference. The **FUN-2** is available in four exciting colors: *Basic Black*, *Mellow Yellow* (shown), *Navy Blue*, and *Ruby Red*.

FUN-3 Mini Boom Microphone

The **FUN-3** mini boom microphone made by **VoxTronix™** is a lightweight headset for use with FRS and GMRS radios. Unlike other headsets which feature uncomfortable, metal headbands, the **FUN-3** has a soft foam rubber earhook that fits over your ear. This earhook easily adjusts to fit either the left or the right ear depending on your preference and the boom also adjusts. The innovative earhook design of the **FUN-3** holds the headset in place even during active outdoor pastimes, such as jogging and bicycling, and provides hours of comfortable operation. The compact, in-line Push-to-Talk (PTT) box has a metal reinforced clothing clip that rotates 360°, enabling the PTT to either be held in your hand, or clipped to your clothing for convenient use. The Push-to-Talk switch can either be operated either manually or locked for hands-free VOX.

**On the Move? Stay in Touch
WHEREVER You go!**

VoxTronix™ audio accessories by PRYME Radio Products® make your Family Radio Service or General Mobile Radio Service transceiver even more portable and useable than it already is. Whether you use your radios for recreation, work, or personal safety, we offer a microphone product that is right for you. VoxTronix™ audio accessories really have it all: privacy, comfort, and style!

We make audio accessories to fit all major brands of FRS and GMRS radio, including Motorola, Cobra, Midland, Kenwood, and many more.

**VOX Gets You Talking
HANDS FREE!**

Most FRS and GMRS radios these days offer a function that allows you to use the radio hands free: Voice Operated Transmit (VOX). However, most audio accessories available do not support VOX at all. Or worse, they support only VOX, leaving you unable to use standard Push-to-Talk (PTT) style operation.

All VoxTronix™ audio accessories are designed with the VOX user in mind. As such, they all feature locking PTT switches, enabling them to be used with either VOX or Push-to-Talk style operation, depending upon your individual needs. Whenever

you need hands free operation, simply lock the PTT switch on your audio accessory and activate your transceiver's VOX function.
