

HUBBELL

Rectangular Floor Boxes/ Above Floor Fittings

Hubbell Premise Wiring

Hubbell rectangular floor boxes are offered in 2 versions. The double-gang cast iron box can be utilized at or below grade. The single-gang stamped steel box is designed for use above grade level. Both boxes include a brass ring, require a minimum 3" pour, and are fully adjustable. The double-gang box is available with a divider to accommodate both power and voice/data, or can be used as a totally dedicated voice/data device.

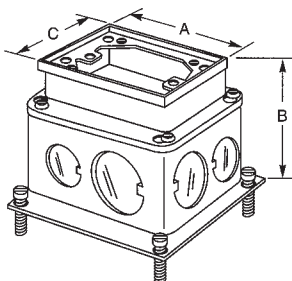

Covers for these boxes are brass and are available in a duplex flap under which a 106 jack frame can be mounted to accept 2 jacks and a 2 1/8" x 1" combination adapter plate. A threaded nipple is inserted in the plate to assist in securing the low-profile and Lo-Con above the floor fittings.

The above the floor fittings are designed to be mated with the single- and double-gang floor boxes. Their use can more than double the number of outlets from the floor box. Although they are for single service, they can be mounted side-by-side on the double-gang floor box and will therefore accommodate data/voice, and power in a large capacity format.

FEATURES/BENEFITS

- | | |
|---------------------------------------|----------------------------------|
| ■ Cast-iron, double-gang | ➤ Suitable for at or below grade |
| ■ Stamped steel, single-gang | ➤ Used above grade |
| ■ Double-gang has divider | ➤ Separates data/voice and power |
