CONNECTOR TERM

The common 15-pin VGA connector found on most video cards, computer monitors, and other devices, is almost universally called "HD-15". HD stands for "high-density", which distinguishes it from connectors having the same form factor but only 2 rows of pins.

"VGA connectors" and their associated cabling are almost always used solely to carry analog component RGBHV (red - green - blue - horizontal sync - vertical sync) video signals along with DDC2 digital clock and data.

INSTALLATION TIPS

Important: Always allow for clearance behind connection location to ensure for proper bend radius with VGA cable assemblies.
