Suppose you would
never forget anything

Recall every word, any time

The FeaturePhone 175 is the perfect integrated combination of a digital Call Recorder and an advanced telephone for analogue lines or extensions. The FeaturePhone 175 has a proven track-record and is specifically designed for people who need to refer to their own calls or simply archive them for reasons of security, reference, training etc..

Recordings are stored on the recorder's internal Flash card and subsequently on CD in a comprehensive archive.

Recordings can be found and played back at the push of a button.

- Internal telephone directory of 500 names and numbers
- Announcing with voice message before recording
- Answering machine functionality
- Hands free function – possibility to use a headset directly
- Comprehensive database; quick search on all parameters
- Direct access to recorded calls and playback via internal speaker
- Use for dictations and meetings
- Recordings on the CD can be attached to an e-mail

Grey Line Call Recorder **Feature Phone**

EN55024 ClassB
FCC15 subpartB
- Safety: EN60950
- Telecom: TBR21

Also record your meetings or dictations

The FeaturePhone 175 has a built-in highly sensitive microphone allowing the user not only to record telephone calls but also use the FP 175 as a meeting or desktop dictation recorder, if needed even with an optional desktop microphone.

Search and find recordings quickly

The FP175 allows you to directly access the recorded calls in memory or on the CD. Both the actual telephone and your PC can search the CD quickly using a range of criteria such as telephone number, date, time and duration of a call. Irrespective of the fact whether you use the FeaturePhone 175 or your PC, it will always be very easy for you to find the relevant call quickly.

- Search queries based on date, time, duration and telephone numbers
- Archiving recorded CD's or specific calls to a database on the PC
- Exporting calls to WAV files for sharing them by e-mail
- User definable views to present the database.

Encryption

The Call Recorder is equipped with an IC Card reader. Using the CryptoCard, available as an option, the recordings can be encrypted. Without a corresponding CryptoCard and Pin code the encrypted recordings cannot be played back. This is not only a professional way to protect the calls, but is especially useful to protect the privacy of the people involved.
