DS1000/2000

IntraMail

Integrated Voice Mail/Auto Attendant!

NEC America is pleased to introduce IntraMail, an integrated Voice Mail system specially designed for the DS1000 and DS2000 systems. AND, it's available at a significant savings versus previous voice mail systems. IntraMail is immediately available as a four port/four hour system and a larger eight port/eight hour system.

IntraMail is truly an integrated system. It installs inside the common equipment saving wall space and AC connection requirements. Just plug in IntraMail, power up and your voice mail is ready to take messages. It's that simple. Station ports aren't required so it doesn't reduce system capacity. Interactive "Soft" key prompts on Display Phones help users handle their messages. A flashing message lamp lets a user know that the IntraMail has a message for them.

IntraMail also provides Auto Attendant, Multiple Greetings, Flexible Answer Schedules, Fax Detection, Answering Machine Emulation, Conversation Record and many popular voice mail features that let your customer get the most for their communications dollars.

IntraMail can be ordered from any authorized UBSD Supply Distributor. It requires a CPU-B for the DS2000 (80025B), which has been shipping in kits since 12/02. A DS1000 requires a new KSU (80200A), which just began shipping to UBSD Authorized Supply Distributors in April. Both systems require software version 03.01.00 to support IntraMail.
