

Revised Product Update

May 6, 2003

Lightspeed[®] Fiber Termination Kit.

Siemon's Lightspeed fiber termination kit has recently undergone a total redesign in conjunction with a change to our polishing film (included in the consumables kit). The improved kit features a high quality 400 power microscope, several tool changes, and improved carry case capacity. The new tools in this fiber kit have been carefully evaluated and chosen based on installer feedback.

NEW PRODUCT FEATURES

- High quality 400 power Microscope with universal head (attachment head for LC style is available separately).
- A new double-sided sapphire cleave blade provides twice the usable life. Just flip the blade around when dull.
- The No-Nik brand buffer stripper has been replaced with a Miller style as preferred by experienced installers.
- Masking tape has been replaced by black electrical tape to provide much better visibility of difficult to see fiber pieces.
- Standard tweezers replaced with a convenient release-to-hold style tweezers for hands-free function.
- Carry case improved with larger pockets
- Several included tools are also available as individual 'finished-good' items and may be ordered separately. See separate associated Revised Product Update entitled '*Replacement Tools for Fiber Termination Kit*' for additional details.
- All consumables are available separately (see optional ordering information below). Also see separate associated Revised Product Update entitled '*Revised Lightspeed Fiber Consumables Kit*' for additional details.
