

NEW CATALOG ITEM

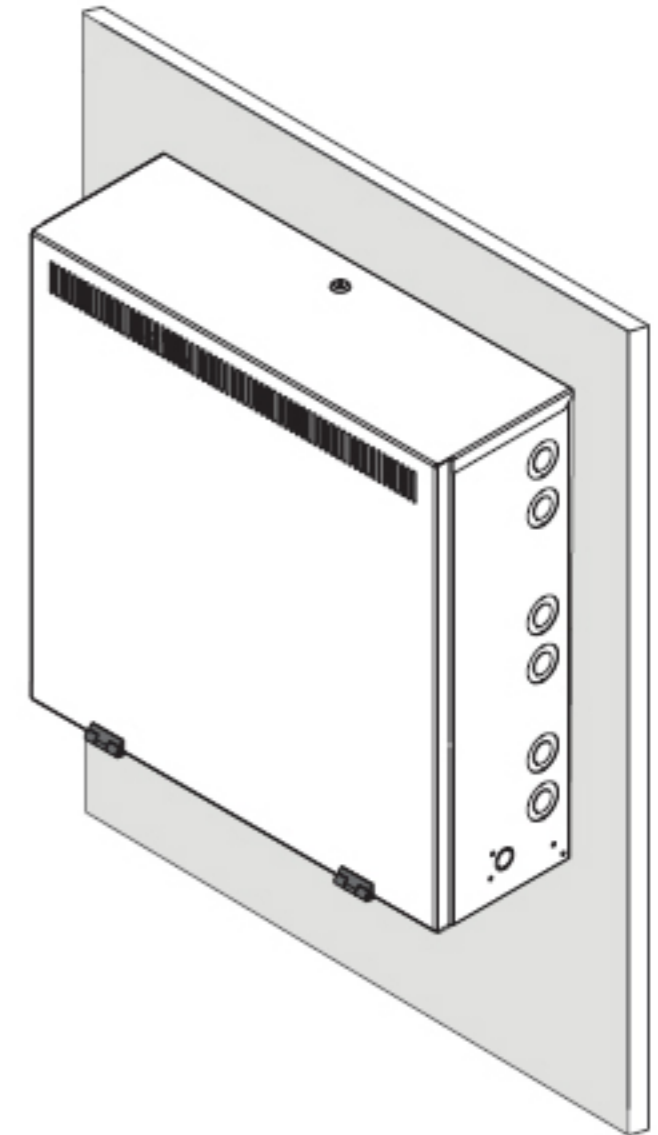

BENEFITS:

- 8.6" overall depth saves space and increases safety in high-traffic settings such as classrooms and stores.
- Unique rail system maximizes inner space and provides flexibility for mounting your equipment.
- L-shaped, removable door with quick-release hinges eases installation.
- Multiple sets of knockouts allow flexibility in cable organization.

THINLINE WALL-MOUNT CABINET

Chatsworth Products, Inc. (CPI) has created a new space-saving wall-mount cabinet that safely secures 19" rack-mount network equipment with minimal intrusion into the room. The ThinLine Wall-Mount Cabinet stands off only 8.6" from the wall to alleviate safety concerns and space limitations in tight areas and high-traffic places such as classrooms and retail stores.

Despite its small size, CPI's ThinLine Wall-Mount Cabinet maximizes inner space with a distinctive layered equipment mounting arrangement utilizing stair-stepped rails. Using only 8.6" of depth (generally 4 RMU), the cabinet holds a switch, horizontal cable manager, patch panel, fiber service loop and fiber-optic patch panel – with room for additional mounting needs.

Installation is simple by removing the L-shaped door, leaving only a 20-pound back panel to be mounted to the wall. The unique design allows the cabinet to be installed in one of three positions (upright, right-hinged door or left-hinged door), ensuring the best position based on ceiling height and proximity to other walls. Once installed, the door can be re-attached and locked for security.

Knockouts on three sides and the back panel allow cable entry and exit. The knockout pattern – sized for 3/4" and 1-1/2" fittings – facilitates easy integration with various Wiremold® products for a clean installation. Internal edge-protected pass-through ports in the rails permit easy cable routing while Safe-T-Grip® straps (included) secure the cables.

The cabinet also includes a 2" x 4" junction box to hold an optional surge-suppressed duplex outlet, which eliminates the need for a power strip. Other options include a Patch Panel Wire Management Bar, Fiber Slack Manager Panel and a Noise Reduction Kit to reduce noise created within the cabinet.

The cabinet is manufactured using rugged 16-gauge steel and ships fully assembled with mounting hardware. The cabinet's static load rating is 75 pounds. For more information, contact an authorized CPI distributor or call CPI Technical Support at 800-834-4969.
