

Product Description

The Enclosure Depth Extender is designed to fit the 28" and 42" SOHO Access™ enclosures. This accessory provides an additional 2" of depth extending an enclosure's internal capacity to a total of 5.75". This extra depth provides more room inside the enclosure to accommodate larger equipment, while multiple air vents located on the top, bottom, and sides of the unit allow for greater air circulation. Airflow through the vented areas provides additional protection for temperature sensitive modules and equipment. Also, its one piece construction allows for quick and easy installation. In a flush mounted application the Depth Extender fits on the perimeter of the wall opening creating a 2" frame between the drywall and the enclosure door or panel cover.

SAE-EXT28

2" depth extender for 28" enclosure, venting holes for heat dissipation, includes mounting screws

SAE-EXT42

2" depth extender for 42" enclosure, venting holes for heat dissipation, includes mounting screws

Features

- Facilitates an additional 2" of depth
- Venting holes provide increased heat dissipation
- One piece construction for easy installation

Specifications

Dimensions	H (29.125", 42.125")
	W (15.25")
	D (2")
Materials	16 AWG Steel
Paint	Powder Coat
Safety	cULus, Security and Signaling
