QUATTRO

What a Tabletop Conference Phone is Supposed to Be

Continuing in the tradition of the highly successful Duet series of conference phones, Phoenix Audio Technologies, the company whose audio expertise is used in both civilian and military applications, now brings you the Quattro, one of the most technologically advanced 2 Line Table Top Conference phones ever produced.

Quattro is the first conference phone that grows with your network. No longer will you have to replace units as your voice system

migrates to a different technology. All Quattro's come standard with USB connectivity for your soft phone, internet phone (PC or MAC), or desktop video conferencing applications - Plus they have a second port that can be set up for PSTN (analog), Video Codec's, SIP, and Bluetooth with more on the way.

Key Features and Benefits:

- **Easy to install** – Unlike many of our competitors there is no software to download no discs to upload. Just connect it to your network and make your calls. That's really all there is to it.
- **Easy to use** - Utilizes your current phone or soft phone to place calls, speed dial, set up conferences, call forward, put a call on hold, and all of the other features of your current phone system. There are no learning curves, no training, just immediate gains in productivity.
- **Expandable** – Units can be daisy chained together in a virtually unlimited string to satisfy any size or shaped room.
- **4 Highly Efficient Speakers for Exceptional Output Levels** - Assures you that everyone in the room will hear the conference no matter where they sit.
- **About half the size of the competition** - Being heard and not seen is the best approach for a conference phone
- **Two Year Warranty** – Twice the industry standard
- **Best of Breed High Definition, Wide Band Audio with True Full Duplex** – Gives you tremendous clarity without any attenuation of the send or receive signals. We incorporate latest in digital processing and technology including 5 echo cancellers , beam forming microphone algorithms, voice activity detectors, de-reverb, and AGC just to name a few.

Ultimately what does all this mean to you? It means that the Quattro becomes so transparent to the meeting that you forget you are on a conference phone. You get to spend your time concentrating on the content of what you are saying, not how you are saying it.

Isn't that what your conference phone is supposed to do?
