SureCall Amplifier packages include transceiver antennas and both AC and DC power supplies. The actual package contents vary for each model. Visit our website for more details.

Dropped Calls? Poor Reception?

Reach Everywhere!
with

SureCall™

Signal Amplifiers

Cellphone-Mate, Inc. designs, manufactures, and sells a line of high-quality electronic accessories for the mobile communications market. The SureCall line of Signal Amplifiers boost the range and reception of most any call by up to 10x! It will make you feel like you're right next to a transmitter tower, without actually having one anywhere in sight. The product line includes a range of solutions, each one specifically designed to meet the needs of a different type of user, from the economy-minded individual all the way up to high-performance campus-wide boosting systems for large enterprises. With a SureCall Amplifier doing all the long-range work, the battery on your cellphone drains slower, thereby increasing talk time. Finally, with proper use of a SureCall Amplifier, dangerous hot spots are removed a safe distance away from the user's body.

NOTE: The SureCall Amplifiers listed in this brochure do not support the 806-824MHz frequency spectrum currently used by Motorola's iDEN phones.
