

Revolabs HD™ Gold Control Panel Windows® Software Program with GUI

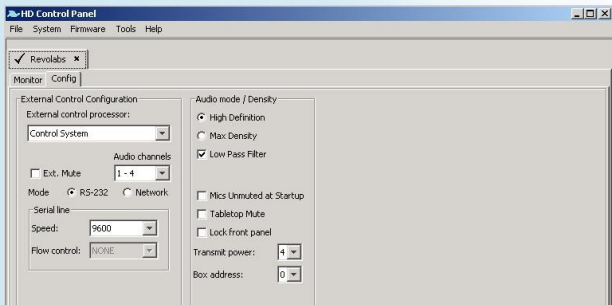

Want MORE out of the HD Control Panel?

The Revolabs HD Gold Control Panel provides more control of the networked Executive HD Systems and HD Wireless Microphones. It also provides the ability to more closely monitor the real-time state of each microphone.

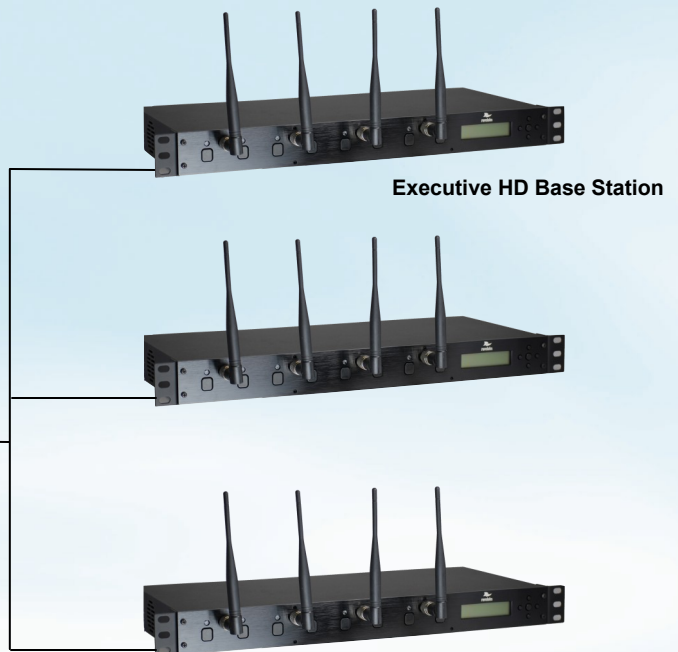

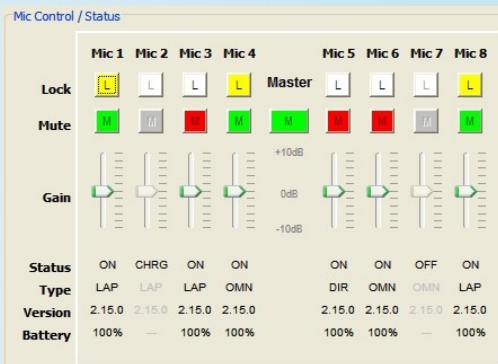

More: Modify Configuration Settings

More configuration settings can be modified via the HD Gold Control Panel. It also includes an option to start the HD Wireless Microphones muted or unmuted when they are removed from the Charger Base.

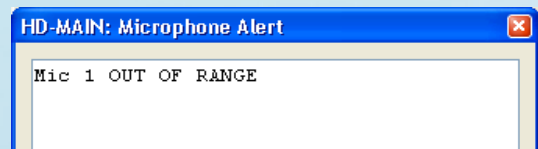

More: Monitor and Control Status of HD Systems and Microphones

The HD Gold Control Panel not only shows the type, versions and mute and battery status of the HD Wireless Microphones, but you can control the mute status, the gain and can lock out presenters from using the mute button.

More: Protect the HD Wireless Microphones

The HD Gold Control Panel provides real-time notification if the HD Wireless Microphones are taken out of range. A pop-up window alerts you that the microphones are out of range and the status shows OUT. This helps prevent the theft or loss of the HD Microphones.

More Information Available for Control Systems

The HD Gold Control Panel will relay the settings and status of the HD Wireless Microphones to the leading Integrated AV Control Systems. This makes it very easy to control and monitor the status of the individual HD Wireless Microphones through the Integrated AV Control System.

Get More with the HD Gold Control Panel!
