

OmniCord™

Adapter and audio booster in one.

Because most telephone brands are wired differently, connecting a headset to your phone is not always as simple as you'd like. And if you also need to boost the volume of your headset mic? You need another cord, another connection—more clutter on your already-crowded desk. OmniCord is the one-piece solution. A single cord that replaces both the audio booster and adapter cable, OmniCord simplifies setup for virtually all telephone systems.

OmniCord is the one-piece solution that makes headset setup simple.

- **Adapter** and audio booster in one cord.
- **Three-position compatibility switch** covers most phone types.
- **Eight-position audio booster** provides transmit amplification when needed.
- **Three versions available** for use with major headset brands.
- **One-year warranty.**

OmniCord. One cord does it all.

Simplicity. OmniCord is easy to set up and use.

Compatibility. OmniCord works with most phone systems, as well as most major headset brands.

Cost-savings and convenience. By replacing both the audio booster and adapter cord, OmniCord cuts workspace clutter—and equipment costs.

Audio Booster: Eight-position slide switch for selecting headset microphone gain. Position one is straight through without amplification. Positions two through eight offer selectable transmit amplification levels.

Compatibility Switch: Three-position slide switch for selecting the three common headset/handset port wiring configurations.
