FT Family of Digital Telephones

The Fujitsu family of FT digital telephones combines the sophistication and power of digital technology with the simplicity of a user-friendly design. From cost effective multi-line sets to full featured executive sets, the FT family provides the digital features found in all models of the Fujitsu family of PBXs.

Choices.
Feature Rich.
Capable.

FUJITSU

The FT family offers four models to choose from, the FT12, FT12D, FT12DS, FT24DS. The 30 Button module and the Analog add-on module which can be "snapped on" easily, add additional functionality and flexibility to meet your needs. Whether you need fully programmable feature phones, speaker-phones, LCD displays or any combination thereof, the FT series of digital telephones is designed to meet your requirements.

The FT family was created to combine sophistication with a wide range of choices. Sleek styling with a tilt-up stand, a small footprint and improved ergonomic design make the FT family of digital telephones an attractive addition to any executive's desktop. Yet the FT family also offers cost-effective models that let you extend the F9600's digital telephones to anyone in your organization.

FT "D" telephones add a 2x20 LCD display and FT "DS" telephones combine display and hands-free capabilities for access to the widest range of calling features.

The FT12, FT12D and FT12DS offer 12 programmable buttons, plus eight fixed-feature buttons for quick access to the F9600's most popular station features. And the FT24DS builds on the FT12DS' capabilities with 24 programmable buttons. The 30 Button Module adds 30 additional programmable buttons to the FT12D, FT12DS and the FT24DS models.

The FT family of digital telephones was designed to offer sophisticated calling capabilities through a user-friendly interface. All FT "D" telephone sets feature on-screen programming capabilities, making it easy to create customized feature sets on your programmable buttons.

One-touch auto-dial functionality is standard from the FT12 to the FT24DS. Plus context-sensitive control keys give you easy control over handset, ringer and speakerphone volume levels as well as contrast controls for your LCD display.

Eight ringer tones differentiate your phone from others in your group. And dual color (red and green) LEDs on each programmable button make it easier to manage your calls.

The Analog add-on module increases FT functionality through modem access and recording. With the Analog add-on module dial-up capability users can talk to someone while accessing the Internet. Users also have the option for automatic dial-out from a PC contact manager. To enhance customer service the Analog add-on module has a port for recording and monitoring devices.

FT "D" sets offer enhanced capabilities when combined with F*IP*N™ (Fujitsu's Intelligent Private Network) and public ISDN services. FT "D" sets extend the F9600's calling party and called party name and number display for calls placed to, and from, users in a F*IP*N network. And connecting the F9600 to public ISDN Primary Rate Interface services lets the FT "D" phone display the calling name and number.

FT "D" digital telephones also provide access to Fujitsu's Dial-by-Name feature. When your F9600 is equipped with a Dial-by-Name server, FT "D" phone users have easy access up to 10,000 one-touch Dial-by-Name entries in up to four different directories.

The FT family of digital telephones enables you to stay in touch with your customers, business partners and co-workers and are your ideal choice for business communications solutions.

Four sophisticated and stylish models offer all businesses attractive and cost-effective digital telephone solutions.
