

Series VC Wall Mount Volume Controls

Wheelock's VC-10 and VC-35 attenuators are ideal for controlling the volume of a single speaker or a group of speakers on a 25V or 70V line.

These volume controls are of auto-transformer design for best efficiency and are crafted from only the finest materials, including a stainless steel wall plate.

The VC-10 will handle speaker loads up to 10 watts; and the VC-35 will handle 35 watts. Both units feature a rotary switch that attenuates in 3dB steps to a completely off position.

VC-10

VC-35

Specifications & Ordering Information

| Model Number | Order Code | Power Handling | Frequency Response | Insertion Loss | Wall Plate |
|--------------|------------|----------------|--------------------|----------------|-------------|
| VC-10 | 5159 | 10 Watts | Better than 17KHz | Less than .5dB | Single Gang |
| VC-35 | 5160 | 35 Watts | Better than 17KHz | Less than .5dB | Double Gang |
