## Replacement Tools for Fiber Termination Kit.

Available as replacement parts or just to speed up termination time, several tools included with the fiber termination kit (P/N: FTERM-L2) are also available separately as detailed below. All tools have been carefully evaluated and chosen based on Siemon Certified installer feedback.

### PRODUCT FEATURES

- High quality 400X power Microscope with universal head included. Attachment head for LC style is available separately.
- The new cleave tool features a double-sided sapphire blade to provide twice the usable life.
- Electrician style scissor with serrated cutting edge is perfect for cutting through the Kevlar strands found in fiber cables.
- Ergonomic Crimp tool with 3-position crimp die (included) for performing jacketed style termination with ST, SC, and LC type connectors.
- Speed up termination time with additional Fiber Polishing Pads. These pads with a stiff Plexiglas back provide ideal polishing conditions on virtually any surface. The rubber polishing surface provides ideal polishing conditions to obtain optimum end-face geometry.
- The slotted polishing puck is a must with the wet polish method and provides for a smooth debris catching procedure. The puck is a durable high strength plastic material and will accommodate both ST & SC connectors – see the LC upgrade kit for information on the LC puck.

FT-MS400

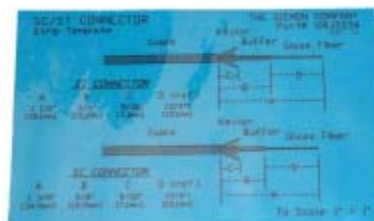

FT-SCRIBE CI-SCISSORS FT-CRIMP

FT-PAD

FT-PUCK

FT-TMPL

### ORDERING INFORMATION

- FT-MS400 ..... 400X power microscope.  
FT-SCRIBE ..... Double bladed fiber cleaver  
CI- SCISSORS ..... Electrician scissors  
FT- CRIMP ..... Crimp Tool w/3-position die for ST/SC/LC  
FT-PAD ..... 6 in. x 6 in. polishing pad  
FT-PUCK ..... SC/ST compatible polishing puck  
FT-TMPL ..... Template for SC/ST and LC connectors
