

TransTalk® 9000 Digital Wireless System

On-premises mobile communications
your business can depend on

Businesses today pay a price when key employees are out of touch, even for a few moments. Important decisions get delayed, customer needs go unmet, sales are lost. And in today's 24-hour, customer-driven economy, the one place where businesses are often most vulnerable to a communications breakdown is inside the office, during normal business hours.

If being away from the phone—whether it's down the hall, on another floor, or out in the warehouse—means key people in your business can't be reached, it's time to get the Avaya TransTalk® 9000 Digital Wireless System.

The TransTalk 9000 Digital Wireless System delivers the quality, features and flexibility that will make wireless communications essential to your day-to-day operations. Much more than just a residential cordless phone for the office, TransTalk is truly business-ready. It integrates seamlessly with a wide range of Avaya

solutions (including the PARTNER® Advanced Communications System (ACS), MERLIN MAGIX™ Integrated System (IS), the DEFINITY® System and the Avaya IP600. Get full access to all your lines, put calls on hold, see incoming caller ID, set up conference calls, check messages—all while away from your desk. And because all calls are going through your communications system, there's no additional charge as there would be if you were using the public cellular network. Also, when you attach a headset to your TransTalk wireless handset, you are enjoying hands-free mobility.

The TransTalk 9040 is
a very flexible solution

Each TransTalk wireless handset delivers the same set of features as a desk phone. You can roam your business premises and bring all your communications capabilities with you.

With the 4-line backlit display on the TransTalk 9040 wireless handset, you can set priorities and handle calls more effectively. In addition to Caller ID, Message Waiting notification is also available—another way to keep employees accessible anytime, anywhere.

With the TransTalk solution, you have the flexibility to divide your coverage area into two zones, delivering crystal clear voice quality at distances up to 900 feet.

As your business grows, your TransTalk® Digital Wireless system will grow with you. It's compatible with a wide range of solutions from Avaya. You can have up to 18 TransTalk 9040 wireless handsets on the PARTNER® ACS and Classic MERLIN® systems, and up to 30 TransTalk handsets with MERLIN MAGIX™ IS and DEFINITY® Systems.

Large facilities (warehouses, large equipment/construction supply yards, etc.), can be cost-efficiently covered. It's been extremely successful in places that are notorious for poor reception—such as distribution centers. Additional antennae can also be

strategically placed to improve coverage in large outdoor areas.

The result is an on-premises wireless solution that is simple, powerful and economical. Once you experience all the convenience of the Avaya TransTalk solution, you will wonder how you ever got along without it.

Compatibility and simple setup

- The Avaya TransTalk 9000 Digital Wireless Solution is compatible with both existing and current releases of Avaya communications solutions. Avaya continues to support existing TransTalk solutions that use the TransTalk 9031 wireless handset.
- With the TransTalk 9040, Avaya has simplified set-up and administration of the wireless system. Each base station now supports up to two TransTalk 9040 wireless handsets (it's easy to add the second one at any time) and no longer requires a carrier assembly or separate local AC power supply. And TransTalk 9040 wireless handsets support ATL, ETR, TDL and DCP station connectivity, simplifying connections and lowering costs.

Expand your responsiveness

The TransTalk® 9000 Digital Wireless System helps ensure strong ties to all the people you do business with: customers, suppliers, partners. It helps make it easy for you and your employees to respond to virtually any business need when and where they want. And it makes people more productive—they can keep doing their job without having to hunt down a telephone. Here are some typical examples of the TransTalk solution in action.

- **Sales people.** Do your sales people have to be out on a selling floor? Leads, referrals, prospects, and active customers can still reach them if they are carrying a TransTalk wireless handset. They can check messages, return important calls, and serve the customers who are so important to your business.

TransTalk 9040

Wireless Handset—standard business features

Delivering all the functionality of a regular, wired desk phone, the TransTalk 9040 wireless handset provides a full set of call appearance/feature buttons, delivering one-touch access to conference, redial, hold, mute, transfer and other standard business features.

The backlit display is easy to read in the dimly lit reaches of a warehouse, or wherever lighting is not particularly favorable, and is also visible when the phone is sitting upright in the battery charger,

- **Support staff.** Keeping a small business lean and sharp means that support staffers are constantly on the move: checking details, solving problems small and large, getting information from colleagues in other areas, pushing to get things done. With the TransTalk® solution, they don't have to leave everything else behind when a task that takes them to another part of the business comes up.
- **Managers/supervisors.** Managers and supervisors constantly move around, coaching, solving problems and offering their support. They can be more effective if they're not out of reach when they're away from their desks.
- **Experts.** People with specialized skills—doctors, IT professionals, designers, engineers—need to be where the action is. And that's not necessarily at their desks.

- **Security.** Security personnel need to be canvassing the business premises—and they especially need to be in touch. They need the ability to summon help if it's required and to report in. With TransTalk 9040, they'll be able to do just that.
- **Manufacturing.** Your employees will be more effective if they're available. Problems get solved faster. Changes can be made in an organized way. Critical information can be exchanged in real time.
- **Warehouse.** Employees who work in your warehouse can choose an optional headset and fill and expedite orders, answer questions and keep the goods and information flowing—all with their hands free.
- **Peak days/seasons.** Does your business experience temporary expansion on special days or even seasonally? The TransTalk 9040 can help you maintain the flow of communication without the expense of having to hard-wire new phones.

increasing its usefulness even when users are at their desk.

A built-in vibrator lets you detect ringing if you're in a meeting, or some other situation where actual ringing would be bothersome. Weighing in at just eight ounces, its lightweight enough to take anywhere, and comes with its own belt clip and wrist strap.

- **Standard battery life** gives you 3 hours of talk time, and 22 hours of standby. You can also buy an extended use battery for 8 hours of talk and 72 hours of standby.
- **A Fast Battery Charger** will charge two batteries at once and recondition them at the same time.

- **Battery backup** will give you nearly unlimited talk time if you use 2 batteries with the standard battery charger.

The TransTalk 9040 wireless handset works up to 900 feet away from the Radio Module. The system can be divided into two zones with approximately 1 million square feet of coverage—it works with a manual handoff as you move from zone to zone.

You've got Avaya

When you add an Avaya mobility solution to your communications system, remember that Avaya has developed, designed and marketed some of the most important advances in mobility. We have a heritage of innovation and excellence for over 130 years in business communications.

TransTalk® 9000 System

Wireless Handset

Dimensions	6" x 2" x 1"
Weight	8 oz.
Color	Black
Display	Liquid crystal, alphanumeric, with line button and feature/function icons. Display is backlit.

Battery Fast Charger

Dimensions	7 1/2" x 4 3/4" x 3 1/4" (handset in place)
Weight	16 oz.
Color	Black

Battery

Type	Rechargeable metal hydride battery pack
Charging time	Maximum 1.5 hours to fully charge
Consumption	3.5 hours talk, 22 hours standby (8 hours talk, 72 hours standby with extended use battery) Battery reconditioning circuitry (handset and spare chargers)

Simultaneous Conversations

TransTalk supports up to 18 simultaneous users (key systems) and 30 users (PBX systems).

Zones

Customers can implement multiple single zones, but TransTalk does not support the seamless hand-off of calls between two zones (this is a multizone system characteristic). TransTalk does offer a dual-zone option with manual handoff between zones. This system is suitable for users who need to work in either zone with occasional calls bridging both.

Multifloor coverage

The quality of coverage in a multifloor building depends on building construction. The TransTalk system has been tested in numerous office buildings with several floors. However, remember that every TransTalk installation is different. The actual range of coverage when transmitting between floors will depend on your facility.

Compatible Adjuncts/Systems

The TransTalk System is compatible with all Avaya PARTNER®, MERLIN® and DEFINITY® systems; and (with additional equipment) System 25, System 75, and System 85.

Please note: Maximum cable distance from host system to DRM-E: 1000 ft.
Maximum cable distance from host to DRM-D: 3000 ft.
