

Vertical Cable Management Channel

Mighty Mo Cable Management System: The System that does it all!

The 102 mm Vertical Cable Management Channel's patent pending design promotes efficient routing of patch or cross connect cables between distribution racks. The large open channels with hinged latches allow easy access during moves, adds or changes. The 152 mm channel is used where 2 Mighty Mo 3 racks are bolted side by side. It creates a 51 mm channel between racks for front to back routing of equipment cables and patch cords. Both versions include all necessary mounting hardware.

Features and Benefits

- Channels mount easily with blunt point self threading fasteners
- All hardware supplied for mounting on face of 2 Mighty Mos or end of row
- Wire construction has no sharp edges to snag patch cords

This product is part of the Mighty Mo System
